

## History of the manufacturer

### Harvey Radio Labs., Harvey - Wells; Brookline, Southbridge, MA

As a member you can upload pictures (but not single models please) and add text.

Both will display your name after an officer has activated your content, and will be displayed under «Further details ...» plus the text also in the forum.

Name: **Harvey Radio Labs., Harvey - Wells; Brookline, Southbridge, MA (USA)**

Abbreviation: **harvey-wel**

Products: **Model types**

Summary:

#### Harvey Radio Laboratories

12 Boylston St., Brookline, MA

#### Harvey-Wells

Southbridge, MA (1940)

They produced low budget receivers, transceivers and transmitters for amateur and commercial use, among these was the "Bandmaster" transceivers of the late 1940s.

Founded: **1933**

Closed: **1968**

Production: **1933 -**

History: After his companion left the company, Clifford A. Harvey continued on his own, in 1933 Dick Mahler joined the Company.

The "Harvey Radio Labs" produced HF, VHF and UHF transceivers and transmitters as a low budget concurrent to Collins Radio Corp. Their equipment has been used by hams and commercial enterprises. In 1940 John Wells joined the company, the name was changed to "Harvey - Wells Electronics Company" in march 1940. They produced equipment used for police communication, civil defence and the Navy. After the war, within a range of ham band transceivers, Harvey - Wells produced the TBS-50 "Bandmaster". The company didn't make the step to single sideband transmitting technique and numbers of sets sold dropped.

In 1957, the company has been acquired by "Within Machine Works", the "Harvey Radio Labs" company still existed and became owner of broadcasting stations.

In 1940, the "Harvey Radio Labs" company has been sold by Mr Harvey to Frank Lyman, in 1944 as an offspring "Harvey of Cambridge" has been founded.

This manufacturer was suggested by Martin Bösch.
